Portfolio: https://matiaslaukka.github.io/engineering-portfolio/

Business and IT graduate with practical experience managing ecommerce email workflows and writing the tools behind them. I bring hands-on JavaScript/API reporting experience, business understanding and initiative to a software development or integrations trainee role.

PROFESSIONAL EXPERIENCE

IP-Agency Finland Oy | June 2022 - February 2026
Marketing coordination, email specialization and traffic work. Initial internship followed by employment from November 2022.

- Responsible for newsletter and automation work across four ecommerce brands: campaign planning, production coordination, brand consistency, deliverability and performance analysis.

- Wrote most of the JavaScript for scheduled Google Apps Script reporting connecting Klaviyo and Google Analytics APIs to store-specific Google Sheets reports, with some ChatGPT assistance.

- Trained a teammate and the team leader in newsletter production; coordinated with designers and managers and helped colleagues solve practical problems.

- Built a separate daily profile-count alert to support human review of Klaviyo account usage.

SELECTED INDEPENDENT PROJECTS

Project direction, requirements and review with substantial AI collaboration in architecture, implementation, investigation and tests.

Knotty - Local TypeScript/MCP support-investigation workspace with durable state, evidence requirements and human approval. Diagnostic-accuracy research remains unfinished.

Coding Agent Harness - Python orchestration that separates worker completion claims from Git observations, verification commands and reviewer acceptance. Scope observation is not an OS sandbox.

Career Desk - Windows job-discovery and explained-shortlisting application. Authenticated Duunitori alert ingestion and idempotent replay are documented; vacancy-detail coverage and matching quality remain open.

Latent Flow Memory - Python research prototype for linked memory retrieval and contextual route learning around a frozen encoder. Saved synthetic retrieval demonstrations succeeded; a later benchmark showed no added route-accuracy gain.

EDUCATION

Bachelor of Business Administration, Business Information Technology
Laurea University of Applied Sciences | 210 ECTS | Graduated 16 June 2023.

Selected studies: service design, software product design, JavaScript web applications, SQL, research methods, leadership and corporate social responsibility. Thesis: descriptive analysis to support newsletter marketing at IP-Agency.

TECHNOLOGIES & LANGUAGES

Professional: JavaScript / Apps Script, Klaviyo and Google Analytics APIs, Google Sheets.
Personal projects: TypeScript, Python, SQLite, MCP. **Languages:** Finnish and English.
